

Counterflow Condensers

FW Series replacement condensers are cost effective and ideal for packaged applications. The practical cleanable tube and tube condenser design combines maximum efficiency and compact construction. Removable plugs at both ends allow easy cleaning and the model minimizes pressure drops. The FW Series is rated at 300 psig waterside and 450 psig refrigerant side.

SW Series counterflow condensers are an economical replacement for marine and sea use, especially for installations requiring cupro-nickel tubes, such as process, brackish water and pool water applications. The Doucette SW series is a true counterflow tube and tube condenser designed for maximum efficiency, compactness and ease-of-maintenance. Removable plugs at both ends allow for easy cleaning.

Fresh Water Condensers
